DETAILED ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

Claims 1-20 are allowable over the prior art of record for at least the reason that even though the prior art discloses optical multiplexing/demultiplexing systems, wherein a holographically produced grating is used to couple input and output light and wherein the relative position of the input and output ports is adjusted after the fabrication of the grating for optimal coupling, the prior art fails to teach or reasonably suggest, regarding claims 1-7, a self-aligning holographic optical system comprising an input use point and an output use point defined during fabrication of the holographically-formed diffraction grating, regarding claims 8-13, a method of making a self-aligning optical system comprising determining a positional relationship between locations of use points and locations of recording points when fabricating a holographic recording grating and providing an array mount having recording and use points at the locations that satisfy the positional relationship, regarding claims 14-16, a method of aligning an optical system with a holographically-formed diffraction grating comprising providing an array mount with use points and recording points at locations satisfying a positional relationship, whereby the use points in the array mount are automatically aligned with the holographically-formed diffraction grating, and regarding claims 17-20, an array mount comprising a second fixed location defined when fabricating the holographic diffraction grating, the second fixed

location configured to locate an optical fiber for directing an optical signal upon the holographic diffraction grating, as set forth by the claimed combination.
